Title: CUTTING DEVICE

Abstract: A cutting device (1), particularly suited for removing vehicle glazing panels, has forward blade carrier (2) and a rearward handle (3) spaced from the forward blade carrier. The forward blade carrier may function as a handle, the device thereby being operable in two handed use. The rearward handle and forward blade carrier may be movable relative to one another permitting re-configuration of the device (1). The rearward handle and forward blade carrier may be connected by a bridge portion (4). Novel aspects of the blade (7) and lubrication for the device are also described and claimed.
